

## "Build a Todo List Web App with Nuxt 3 and useState() Composable"

### Instructions:

1. Implement a Todo List feature using the useState() composable from Nuxt 3.
2. The feature should work in a page named 'todos.vue', and create a link in the home page that will link to it.
3. Users should be able to add new todos, and remove todos.
4. Ensure that the state of the todos is preserved
5. Display the todos on the web page and make it interactive.
6. Test the functionality to ensure it works as expected.

Happy Coding
